If you want me at the meeting I could probably make it by 10.

As the purpose of the meeting is to go over cleanup and long term impacts to the water supplies I don't personally see a need however I don't mind keeping him informed. I'll leave it up to you as to whether you would like him with the large group or whether you would like to meet independently with him. Once I have a consensus from my colleagues I will let you know whether we will be at the site in the AM or talking via conference call.

> I have had several long discussions with Miller and their consultants this evening. They are amenable and quite frankly want, a meeting with the Department to look at long term impacts and cleanup. Their insurance companies will be at their site tomorrow morning. They would prefer to have an onsite meeting at their facility, I personally feel that this is a good idea to see the site and understand what is actually going on however I do not know everyone's schedule and a conference call will work as well. Also, in the meeting or call will be Adams County EMA staff and the EPA On Scene Coordinators office. It takes about an hour to get to the facility so we would need to leave at approximately 9-9:15.

> If everyone could get their preference back to me as to how they would like to meet, onsite or conference call, I would be appreciative. The indication I got from Miller and their consultant was positive as far as removing the contamination from the swale. Of note to SDW they did ask us to work with NOMA to get an estimate on trucking water if they needed to do that, I would take that as a positive sign, at least until they have an understanding of the cost. Another positive note is that they do have insurance to cover

environmental damages and the consultant will be part of the meeting tomorrow.
